Green Ethiopia
Libokemkem, Amhara
Ebnat (Green Valley extension)
First: new nursery established inside the existing Farmer Training Center area
Very remote, very eroded
180-degree view of the mountains for plantation
Simple school, will be supported with live-fence, orchard and natural resource teaching material.
New dam for power and irrigation
Libokemkem, Amhara
Takern (Mr. Misgan alone)
Plantation site for July 2023
(altitude: 3100 meters above sea level)
Test plantation from 2020
Plantation from 2022

good growth in small sink with soil and moisture accumulation, old trees indicate the potential of the area if conserved properly
Agro-forestry for protecting the field
Successful nursery in harsh condition
Water divide: south, Blue Nile basin
Water divide: north, Tekeze basin (with our plantation from 2022)
Project in the Tigray Region
Until 2019 around 20% of all projects in Ethiopia
since 2020 no activities

- Shebedino
- Dara

Projects in Oromia
- Gimbichu
- Dodota
- Ziway Dugda
- Hetosa
- Tiyo
Sekela, Amhara
Gish Abay (new site)
Afforestation site for July 2023
Newly established nursery in full production after 3 months
Nursery water source and watering
Discussion with guards and agricultural experts
Existing Irrigation channel, amount of water will increase after afforestation.
Potato field with gravity irrigation
Ploughing and planting potatoes (mother and son on front) intercropping with maize (husband on the right)
Ploughing with mules (and planting potatoes behind)
Project in the Tigray Region
Until 2019 around 20% of all projects in Ethiopia
since 2020 no activities

Projects in Amhara
- Libokemkem
- Sekela

Projects in Oromia
- Weliso
- Dukem
- Debre Zeyt
- Liban Zquala

Projects in Sidama
- Loka Abaya
- Shebedino
- Dara

Projects in Oromia
- Gimbichu
- Dodota
- Ziway Dugda
- Hetosa
- Tiyo
Dodota, Oromia Nursery
Good progress in established nursery
Fruit trees: oranges and coffee
Juniperus, same age, small versus big pots
Grevillea, same age, small versus big pots

Healthy seedling, but transportation plantation and growth is questionable
Project in the Tigray Region
Until 2019 around 20% of all projects in Ethiopia
since 2020 no activities

Projects in Amhara
- Libokemkem
- Sekela

Projects in Oromia

- Tiyo
Safa plantation form 2019: site change measurement

Top of the mountain: trees & shrub grow slow with little soil and moisture
Safa plantation form 2019: site change measurement – one look says it all!

Bottom of the mountain: dense vegetation because of soil and moisture accumulation
Adame plantation from 2021: site change measurement (with armed guard as the new forest is again home for hyenas)
Trench and soil bund hardly visible after 2 years, different acacias regenerating
An illustration how the area looked during plantation in June 2019 ...
And how it looks in April 2023, thanks to hard work, zero grazing and strong guarding.
Dara, Sidamo Nursery
Bed with seed collected by farmers: mixed
Maize grinding
Shebedino, Sidamo Nursery
Nursery in good condition
Fruit tree nursery, mainly avocados
Shebedino, Sidamo, Nagasho
A government program will remove the eucalyptus trees below our afforestation.
Private garden of group member: fruit trees, intercropping, eucalyptus removed
Project in the Tigray Region
Until 2019 around 20% of all projects in Ethiopia
since 2020 no activities

Addis Alem
Center for native trees, applied research, by Ambo University (small: start in 2004)
Below the center: perinium creek ...
... for vegetable irrigation (potatoes)
New activity: test with biodegradable pots
(from NaKu Austria, thank you Beat!)
Many things done, impressive achievements, so much more potential. Thank you all for your support!

Safa conservation group Dara, Sidamo (in their forest, started in 2019)
